

Amatite

For Barns and Stables

ORDINARY ready roofing demands painting every two years or so. Amatite Roofing has a mineral surface and needs no painting—and it costs no more than ordinary ready roofings.

That's the whole story. Amatite comes in rolls, ready to lay. Nails and liquid cement are furnished free. No skilled labor is required.

Look into the Amatite proposition. We will send you sample and booklet free.

Address nearest office.

Creonoid *Like Destroyer and Gun Spray*
Creonoid applied on new roofs and old roofs prevents leaks. It is equally useful in the barn house in destroying flies and keeping them at a distance. The cost is trifling.

Everjet Elastic Paint
Jet Black. Water proof, elastic and durable. Ideal for rubber, roofing and outside metal and woodwork. Use it for water tanks, roofs, farm machinery, etc.

FRANK E. HOWE, Editor and Publisher

Friday, March 12, 1915.

There has been little realization in Vermont of the actual conditions in Massachusetts as regards the foot and mouth disease among cattle; and because of that lack of information Vermont has been resting in fancied security. However, the fact comes now with striking force that a large section of Massachusetts is under quarantine, inasmuch as the proposed "farmers' week" at the Massachusetts State Agricultural college has been cancelled because such a meeting would naturally draw attendance from the quarantined district. The truth has come out, too, that 65 towns in that state have been placed under the quarantine regulation. These facts are sufficient to give Vermont people stern warning of the necessity of exercising great care lest the foot and mouth disease become fastened on Vermont farms located only a few miles from Amherst, which is in the center of the infected district in Massachusetts. The regulations imposed by Commissioner F. L. Davis should be rigidly adhered to until such time as he gives notification that the danger is over.—Barre Times.

The commissioner was prompt in establishing a quarantine against adjoining New York counties and if it turns out that Bennington and vicinity escapes a visitation by the disease it will undoubtedly be partially due to his quick action. Farmers in this vicinity are carefully watching their stock and the first indication of trouble will be reported to the commissioner.

Little Wonder Workers

Cole's Little Wonder Workers, the liver pill that contains the new cathartic Phenolphthalein and the old cathartic Aloin combined to make the most effective little liver pill you ever had. Prompt safe and sure relief in any case of disordered stomach, constipation, biliousness, and liver troubles. Forty little sugar coated pellets for 25c. Sold only by Harold W. Cole, Pharmacist.

Some folks are so careful that they preserve expired fire insurance policies on property long since sold, and at the same time so careless as to leave uninsured a life not yet lived, a life certainly necessary for others and as uncertain as necessary. National Life Ins. Co. of Vt. (Mutual). Earle S. Kinsley, General Agent, Mead Building, Rutland, Vt. Adv.

State of Ohio, City of Toledo, I, ss.
Lucas County.
Frank J. Cheney makes oath that he is senior partner of the firm of F. J. Cheney & Co., doing business in the city of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of HALL'S CATARRH CURE.
Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1915.
A. W. GLEASON, Notary Public.
Hall's Catarrh Cure is taken internally and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free.
F. J. CHENEY & CO., Toledo, O.
Sold by all Druggists. Take Hall's Family Pills for constipation.

SUNDERLAND

Daniel Wade of South Dorset was in town Saturday on business.

There was a dance at Jay Bentley's Friday night and a very good time was reported.

Irving Thompson was in Arlington Monday.

John Wade of Dorset was in town Sunday visiting relatives.

The Brightman mill started again this week.

Mrs. Jesse Bentley was in South Dorset one day last week.

W. B. Anderson of Manchester was in town Tuesday on business.

JUDGE HOWE TAKES OATH

Sworn in Before Judge Hand at Burlington.

Burlington, March 5.—The United States court room in the federal building was the scene of a very unusual ceremony yesterday afternoon when Harland B. Howe was sworn in as United States judge for this district and Vernon A. Bullard of this city was sworn in as United States district attorney.

Judge A. M. Hand, who has been sitting at this term of court, adjourned court in the regular manner and then announced that a special term of court would convene for the purpose of installing in office a judge and a district attorney. The usual opening ceremonies, such as the proclamation, etc., were gone through with, and then Judge Hand administered the oath while the audience, which contained almost every attorney in this vicinity, remained standing.

After taking the oath Judge Howe took charge and announced that the district attorney would read the commission of Vernon A. Bullard as United States district attorney. This was done and Judge Howe administered the oath. Following that Judge Howe announced that the purpose for which the special term of court had been convened had been accomplished and it would therefore adjourn.

WILL DRAW STRIKE PAY

Idle Granite Workers Register to Receive Union Benefits.

Montpelier, March 8.—Registration of members of the Granite Cutters' union in this section of the granite belt and tool sharpeners, polishers, lumpers and derrick men whose unions are affiliated, commenced today and will continue daily until a settlement is effected between the strikers and the manufacturers.

In this city the registration was held today and will continue to be held forenoons in the union rooms on Langdon street and in Barre the same hours and also from 1 until 3 o'clock in the afternoon strikers may appear before the officials so that they may draw their daily benefits.

Committees from the Manufacturers' association and the various branches of the granite workers are holding conferences and will continue to do so until an agreement is reached on all questions at issue by both sides. The main propositions have been settled but there still remains a few matters on which opinions differ.

This afternoon the manufacturers gathered to hear the report of the conference committee, which met with a similar committee from the cutters' union but no action was taken and no date has been set for another meeting.

Mr. Ward Tells His Own Story of a New Process for Making Better Bread

About four years ago the Ward Baking Company engaged three trained men and instructed them to devote their time in research for a method of making Better Bread. This resulted in the greatest discovery ever made in the history of the Bread Business, and is a great boon for the benefit of humanity.

In view of the inaccurate, misleading and really absurd newspaper statements that have been made regarding the methods employed by our Company, we wish first to state a fact within the knowledge of every housewife, that yeast is a living organism, and in order to live and multiply, and thereby leaven the dough, the yeast must have food. In the old process this food was the flour, sugar and other constituents of the dough. The yeast consumed a certain portion of these materials and converted them into alcohol and other products, and a gas known as carbon dioxide, which raised the bread and made it light. Under the new discovery very minute amounts of certain salts are added which serve in place of a part of this food which under the old method the yeast consumes. In the old process a portion of the flour, particularly the glutinous part, was broken down by the yeast, and thus valuable nutritive properties were lost. By the new process this does not take place, but, on the contrary, a greater percentage of the natural gluten of the wheat is retained in the baked loaf.

In order that exact minute quantities might be properly introduced first into the water and then into the dough, these salts, were made up into a yeast powder known first as "A. B. C. Powder," and then later under the trade-mark name of "Arkady." Of this Arkady Yeast Powder a very minute amount is added to the sixteen hundred pounds of material—wheat flour, sugar, milk, vegetable oil, yeast, salt and water—which constitute a standard size dough in our bakeries. The result is that there is left in the Bread four one-hundredths of one per cent. of calcium salts, which are the identical salts which are contained in all natural waters and practically all vegetable and animal products.

On a percentage basis fresh milk contains more than four times as much of these calcium salts as is contained in Ward's Bread, or, in other words, one glass of milk contains as much of these salts as two loaves of Ward's Bread. Cheese contains about thirty times as much as Ward's Bread. Peas contain about three times as much as the Bread; Greens, twelve times as much; Beans, five times as much; Chocolate, three times as much. Turnips, twice as much.

All drinking waters contain calcium sulphate varying in quantity in the waters from the different sections of the country, ranging from those which are considered soft waters to those which are considered hard waters. In many natural waters one glass would contain twenty times as much calcium sulphate as is contained in a single slice of Ward's Bread, and, in fact, many waters contain an amount of this salt, such that one glass contains more than a whole loaf of Ward's Bread.

Medical men have shown that a normal adult man drinks in twenty-four hours three and one-half quarts of water. A twenty-four hour supply of many natural waters would contain as much calcium sulphate as is found in ten loaves of Ward's Bread.

The above citations are sufficient to show that the salts are present in such small amounts that no question can arise in any one's mind not antagonistic to the real facts that they are not used for any purposes of adulteration or deception.

Some of the reasons for their use are as follows:

In the leavening of bread the yeast besides forming the gas, carbon dioxide, which makes the bread light, also forms alcohol and certain by-products which in the similar process of fermentation of grains to from whiskey we call "Fusel Oil." This fusel oil is a very poisonous and rather disagreeable smelling oil. This action takes place whenever bread is raised by yeast, whether in the household or in the bakery. The amount of fusel oil and certain other disagreeable acid products thus formed is very small, but has its effect—on the flavor and odor of the bread, and certainly does not make the bread any more wholesome. In the new process as developed by the Ward Bakery, the amount of these fusel oil products is diminished almost to the vanishing point. The result is a bread with better taste, odor, color, texture and flavor, and a more wholesome bread because of the absence in this process of these small amounts of objectionable products.

From the above citations regarding the natural occurrence of these salts, it would be evident to everyone that they are perfectly harmless, as they are present as natural constituents of so many foods that are daily consumed by the people. In fact, we might go further in this, as the consensus of opinion among the best medical authorities is that people do not at the present time obtain in their food sufficient calcium salts which are so necessary for the formation of bones, teeth and other tissue, especially to growing children. Physiologists tell us that an adult man should have in his food one and one-half grams of lime as lime salts per day. To obtain this amount from bread alone he would have to eat seven loaves of Ward's Bread, while one quart of milk would furnish more than the required amount.

It has been a common practice in the purification of water supplies for cities to add to the water small amounts of calcium hypochlorite. This practice is heartily endorsed by all public health and medical authorities. The percentage of added lime put in this way is in practically all cases much greater than the amount of added lime salts in Ward's Bread.

Another common method of leavening breadstuffs, such as biscuits, hot cakes, muffins, etc., is by means of baking powder. Baking Powders very commonly contain some of these same salts which are used in minute amounts as yeast food in this new bread process.

The amount of these salts left in a breadstuff made with such baking powder after baking is in many cases a hundred times as much as that which will be found in Ward's Bread.

To sum up, it may be stated that the new process, has made it possible for us to produce a bread not only better in texture, odor, flavor and color, but a bread which is more wholesome and more healthful than it has been possible to produce under any of the older processes.

During the development of this process the Agricultural Department at Washington was made acquainted with it, and officials of the Department expressed their approval, and as a result of the work patents have been allowed in the United States and are pending in the principal foreign countries.

We know that Ward's Bread is made today is the Best Bread in the World; Better Bread than you can make in your own kitchen, and Better Bread than you can buy, except under the name "Ward."

Our Company has done more for the baking trade in advancing modern ideas in baking and the erection of sanitary sun-lighted plants than any other concern in the trade, and this fact can be demonstrated to the entire satisfaction of any interested person who may visit our Bakery and see the clean, up-to-date and commendable methods employed. The lid is off, we have nothing to hide, never have had anything to hide, and you may feel secure in the use of Ward's Bread and know that when you buy it you will use the best obtainable. No better or cheaper food exists. Feed it to your children in generous portions—it is good for them.

WARD BAKING CO.,
By GEORGE S. WARD, Vice-President.

TAXES

Every deposit (commercial or savings) in The Burlington Trust Co. is TAX FREE to the depositor. This Bank contributes over Twenty Thousand Dollars annually to the revenue of the State but this burden falls upon the stockholders. On all savings accounts in this Bank interest is guaranteed at the rate of FOUR PER CENT., and these accounts also share in the "extra dividends" that are made from time to time as earnings warrant.
